- Neexee TEXTS for **web**.
  - Neexee is the Mailvolution
    (*not just another* email client).
    - No Email Killer is not going to make email disappear. But email is a solution from the 70s that has barely improved lately. Major changes have been to add bold and italics!.
    - We've been working for years to detect email weaknesses and flaws, and we've come with new ideas, improvements and new solutions. We've built from the ground up a revolutionary tool to make email useful and productive. At last.
    - Inline answers, automatic follow-up reminders, real-time information on who's answering the mail, read status, A.I powered dashboard, #tags, @mentions and >tasks within the body, attachment version control system, and so on.
    - A state-of-the-art tool that converts emails into collaborative conversations, correctly organized and presented. One single tool that allows to chat in real time with the participants and include the session as part of the email. A tool to automatically remind you of your pending mails, and of the ones that you're waiting for an answer. One tool that takes business communications to a new level.
    - One tool to rule them all.
  - How's neexee different?
    - Collaborative email. See answers as soon as they are submitted, even if you've started to answer
    - Have chat sessions related to conversations, and have them stored as part of the emails for future reference.
    - Include polls and multiple choice selections
    - Visually impeccable inline answers to avoid chaos
    - Integrated task-manager and calendar
    - #tags, @mentions and >tasks within the body
    - Automatic follow-up reminders
    - Unlimited size attachments with version control
    - Compatible with your current email clients. They may take our lives, but they'll never take our freedom! Choose neexee.
  - Collaborative email is here.
    - No more "crossed emails". No more chaos.
    - Have you opened an email, took long to answer, and then realize that someone else answered in the meantime? Don't let that happen again. Neexee shows who has the mail open and is working on it, in real-time.
    - New answer? Don't close the mail and open it again to paste what you already wrote. Open conversations are automatically updated with new answers, as soon as they have been submitted.
    - See the answers below the original question, always correctly chronologically ordered.
    - neexee treats and shows emails as live evolving conversations. As it should be. May the force be with you.
  - Email is dead. Chat rules!
    - Is it so? "One man's meat is another man's poison". Aka "One man's junk is another man's treasure".
    - Don't argue anymore, don't take sides. To each his own. We've reinvented chat too.
    - Neexee includes real-time information of who of your contacts is online, and allows to chat real-time with them… it also allows channels. Nothing new there, so … why all the fuss?
    - Instead of having neverending chats or channels, neexee creates a session for each email conversation. Have a chat with the recipients of an email, and whatever you speak will be stored along with the mail for future reference... by anyone in the mail. Add tags to the sessions and… *voilá.*
    - I'm gonna make him an offer he can't refuse. The Godfather
  - Forms in emails:
    - You can't make a poll through email... Not a chance.Your can't ask a group of people to select multiple options in a list, and see what everyone chose, in an orderly fashion. Not by email, need a different tool for that. Really? Are we nearly in 2020, or what? Still have to write plain text emails? Quoting Poe's Raven, Nevermore.
    - Neexee allows to create lists of options for recipients to choose between (single or multiple answers), and see everyone answers at a glance.
    - Makes sense, right?
    - Elementary, my dear Watson.

- o More than email
  - Need more? Don't want to bore you, so, in short.
  - Automatic folow-up reminders of the recieved mails pending to be answered, but also of your unanswered sent mails too. No need to manually set the reminders, we'll do it for you.
  - Forced Inline answers to increase order and readability
  - real-time information on who's answering the mail and individualized read status
  - A.I powered dashboard to help you prioritize (geographic tips, importance rules, etc)
  - Tag your emails from the beginning, but also add #tags, @mentions and >tasks within the body, with useful –productive- shortcuts.
  - Attachment version control system to keep track of modifications.
  - *Plugins, browser extensions, desktop versions and many new features coming soon.*
  - And all this, compatible with your current email client, web or desktop!
  - Will you continue with your old plain text email? Shame. Shame. Shame.
